

PARKER - REPLACEMENT DRYER SHELLS AND FILTER CORES

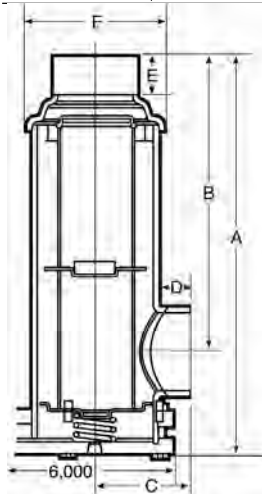

Parker replacement filter cores and drier shells are designed to provide flexibility over a wide range of applications. All models are designed for use in both the liquid and suction line of refrigeration or air conditioning systems. In single or multiple-core applications, cores may be loaded individually for ease of installation in tight spots. A wide range of fittings for suction-line applications and interchangeable laying-in dimensions with other manufactured models increase product versatility. A new design of the internal assembly provides the advantage of using the Parker PFE-48BF filter element, which removes solid contaminants such as copper oxides, chips and other metal fines. The new design is also suited for using Parker drier cores such as the Z-48 or the PCK-48HH, which provides removal of moisture, acid, wax and oil/flux paste.

KEY FEATURES AND BENEFITS

- Solid copper full flow fittings, 5/8 inch to 3-1/8 inch.
- Powder paint exterior coating surpasses 500 hour ASTM salt spray tests and resists corrosion.
- Aluminum end plates and stainless steel bolts resist corrosion
- For suction application: removable screen.
- U.L. listed file no. SA3441, CSA certified LR46423.
- Working pressure: 500 psi.
- All welded construction.

PART NO	DESCRIPTION	No of Cores	Connection Size & Type	Dimensions (in)					
				A	B	C	D	E	F
